- Have the ability to work full time with full commitment as a team.
- Interested in human development. Had and gave some Presentations about it.

Experiences related to Financial Modelling

Going through my 12 years' experience, I have made Financial Models for more than 15 companies, the most important models are: 1- Cash Flows statement 2- Income statement 3- The statement of financial position 4- Revenue comparative and Forecasting Revenue. Those Models allow me or other users to get the financial statement done fastly and accurately, as well as I have the ability to make more models related to Financial Analysis depending on the Data Source that was made for all Models. My way to build Financial Models is to make one source Data for all Models,

that makes the report more reliable, because they came from one data source that contains all historical data. According to the Data Source, making a budget is much easier, as well as the budget is made in the same workbook, that makes it possible to build comparative statements between budget and actual data very easy and fast, with any time needed to be reported. Getting all those experiences made me a good trainer of Financial Modeling, depending on real practical cases I have made many professional courses about Financial Modeling.
